

Question 4 - write a short note on html tag and html element with an example ?

Answer :-

HTML tags are like keyword which define that how web browser will format and display the content. With the help of tag, a web browser can distinguish between an HTML content and simple content. HTML tags contain three main parts - opening tag, content and closing tag. Some HTML tags are unclosed tags.

HTML elements are building blocks of web pages. They are used to define the structure and content of a web page. HTML elements are made up of tags, which are surrounded by angle brackets ( < > ).

For example, the HTML tag for a paragraph <p>.

Two types of HTML elements - inline element and block elements.

Inline element - are displayed on the same line as other text.

Block element - are displayed on a new line.

Some common HTML elements include:

<p> : this is paragraph tag.

<h1> : heading tag

<br> : create the line break tag

<a href=> : elements are used to create a hyperlink.
